Лабораторна робота 3

За темою “Невидимі дані у власних файлах”

Виконав:

Студент 4 курсу
групи 6.04.122.010.22.1
факультету ІТ
Ячунскас Вітас

Дослідження готових стеганографічних інструментів

Encode Decode

To encode a message into an image, choose the image you want to use, enter your text and hit the Encode button.
Save the last image, it will contain your hidden message.
Remember, the more text you want to hide, the larger the image has to be. In case you chose an image that is too small to hold your message you will be informed.

Neither the image nor the message you hide will be at any moment transmitted over the web, all the magic happens within your browser.

Binary representation of your message

```
10000101111100010001111000100001111000111101100010000011000011101010000110000100010000010010010001010110100010000101000011000010001000010001000010001000010001000000011000100110010001100100010110100110001110001
```

Extract Data

Here you can extract data hidden inside of the image. Select some bits and adjust the settings appropriately. The final extracted data is checked against some basic file headers, and so the filetype can be automatically determined.

Please note that Alpha options are only available if the image contains transparency.

Висновки

Отже, в ході лабораторної роботи я оволодів навичками приховування та виявлення інформації в мультимедійних файлах за допомогою стеганографічних методів.
